

ABSTRACT

The personal emergency alert alarm is a device that can be worn by a person at all times if so desired. It can be of a size and shape that is conducive to be worn on a cord around the neck, the wrist, and belt or on a belt loop, it could also be on a key ring. This invention consists of an alarm and a flashing light as a means to attract attention immediately upon activation. It can be used by a wide range of ages and in any situation. The receiver and transmitter can be preset with a code during manufacturing so that only the unit activated will emit a signal and this will prevent confusion, for example in an office, a park, or on a street during tourist season. The device has a small compartment located on the back of the unit to contain a small booklet of important information this booklet comes with each unit and in some situations should be kept on a person at all times.
